

Senior Manager Environmental Services, Ryder, Miami, FL or Telecommute

Overall function of the Senior Manager, Environmental Services is to provide environmental management services to ensure Ryder and Customers are knowledgeable about new regulations related to diesel emission control mandates, evolving fuel standards, greenhouse gas reporting, sustainability management programs, as well as grants, public funding and incentive monies available to offset costs associated with new green initiatives and compliance with environmental regulations. This position will work with Group Director, Environmental & Sustainability to support Ryder field operations in understanding and developing strategies to comply with these new environmental regulations in the most cost effective manner and to leverage financial funding opportunities when available. Responsibilities will include:

- Monitor new federal, state and local regulations related to emission controls, fuel standards and climate change
- Ensure compliance with state-specific emission compliance requirements (i.e.: CARB) and new EPA regulations (Endangerment Rule)
- Provide management and accounting of greenhouse gas emissions for direct and indirect emission sources for company operations and customer services
- Research emission reporting & permitting requirements and conduct air emissions calculations and perform GHG data analysis related to vehicle and facility operations
- Define emission sources and manage emission reduction initiatives in accordance with new regulations
- Monitor newly developed GHG inventories and accounting standards/processes, work with Group Director to ensure Ryder internal controls exist to accurately report in accordance with global standards and US regulations as they evolve
- Analyze and communicate regulatory objectives and perform technical analysis of environmental laws/regulations to assess impact on Ryder business segments
- Provide environmental training & awareness for Ryder business leaders, sales, marketing and operations teams around emissions management and GHG accounting and other green initiatives
- Requirements: Bachelor's degree in Environmental Sciences and minimum of 3-5 years direct professional experience in related subject matter area.
- Proven knowledge of environmental regulations related to emissions, emission controls, or related issues working with regulatory, consulting or private industry required
- Experience interpreting and adopting environmental regulations to distinct business environments
- Hands on experience working with or developing greenhouse (GHG) monitoring inventories, establishing emission baselines, and formulating target reduction goals.
- Excellent technical writing and communication skills, experience providing training and performing environmental auditing
- Advanced level computer skills such as Microsoft Excel (formulas, data tables, pivot charts, queries, custom functions, data management and analysis) and Microsoft Word (keyboard short cuts, creating macros, merge, merge queries, templates, table techniques, and working with images and text)
- 30-50% travel required
